

```
*****;  
*   Activity 2.09                                     *;  
*   1) This program imports a tab-delimited file. Run *;  
*       the program twice and carefully read the log. *;  
*       What is different about the second submission? *;  
*   2) Fix the program and rerun it to confirm that the *;  
*       import is successful.                         *;  
*****;
```

*Modify the path if necessary;

```
proc import datafile="s:/workshop/data/storm_damage.tab"  
            dbms=tab out=storm_damage_tab;  
run;
```
