```
1  *****************************************************************;
2  *   Activity 3.03                                             *;
3  *   1) Notice that the expressions for WindAvg1 and           *;
4  *      WindAvg2 are the same. Run the program and examine     *;
5  *      the output table.                                      *;
6  *   2) Modify the WindAvg1 expression to use the ROUND        *;
7  *      function to round values to the nearest tenth (.1).    *;
8  *   3) Add a FORMAT statement to format WindAvg2 with the     *;
9  *      5.1 format. Run the program. What is the difference    *;
10 *      between using a function and a format?                 *;
11 *****************************************************************;
12
13 data wind_avg;
14     set pg2.storm_top4_wide;
15     WindAvg1=round(mean(of Wind1-Wind4),0.1);
16     WindAvg2=mean(of Wind1-Wind4);
17     format WindAvg2 5.1;
18 run;
